0	0	1	0																																			
0	1	0	1																																			
0	1	1	0																																			
1	0	0	0																																			
1	0	1	0																																			
1	1	0	1																																			
1	1	1	0																																			
1.(b)	Yes. Input that represents Switch (A) is not in the Boolean expression/circuit/solution. Therefore, it is not required for the operation of the air-conditioner.	1 1 2																																				

2.

Assume that the entire private address range is used (it can be any range)

Since there are 4 subnets, it is required to divide the address range into 4 segments.

For this, add two more bits to the subnet mask.

Subnet mask length becomes 10.

11111111.11000000.00000000.00000000

Therefore, the 4 subnets would be:

1. 00001010.00000000.00000000.00000000 = 10.0.0.0/10
2. 00001010.01000000.00000000.00000000 = 10.64.0.0/10
3. 00001010.10000000.00000000.00000000 = 10.128.0.0/10
4. 00001010.11000000.00000000.00000000 = 10.192.0.0/10

[1 x 4] 4

(if they decide to use /24 ranges, they should assume that 255 addresses are enough for each subnet. Then they should show the selection of /24 ranges.)

Note: If the selected ranges are shown in the diagram these 4 marks can be given

Needed Devices: **05 Hubs, Switch, Router, Firewall, Web Server, Mail Server, Proxy server, Application Server.**

Since any computer in any subnetwork can access resources in all subnetworks, the application server can be established in any subnetwork. Since it is for internal clients, it should not be located in the DMZ.

Note: 1. Proxy Server could be directly connect to the Switch

When the packet goes to the proxy server, its source IP address is rewritten with the public IP address of proxy server.

3.(a)	G2C or Government to Consumer Note: Government to Citizen only 2 marks	3 3
3.(b)	G2B or G2E, It is a service provided in online by the Government to Business or Employees.	1 1 2
3.(c)	Because it is a service provided by business to government . Therefore it is B2G.	4 1 5
3.(d)	Law: To prepare fine calculations mechanism according to the (<i>criticality of the identified place</i>). Epidemic Control Division: (To develop formula to measure the <i>criticality of the identified place related to dengue breeding</i>).	3 2 5
